DIGITAL SKILLS PROGRAMME

Content Creation with YouTube

A new series of courses helping clients with visual impairment create, edit and publish their own content.

The SAVH Digital Skills Programme introduced a series of content creation courses in October 2026, in collaboration with student volunteers from five schools. The aim is to equip clients with visual impairment with the knowledge and practical skills to create, edit and publish content independently, using different platforms and AI.

IN COLLABORATION WITH STUDENT VOLUNTEERS FROM

Hwa Chong Institution · Nanyang Girls' High School · Raffles Girls' School · CHIJ Toa Payoh · Catholic High School

Clients and student volunteers working side by side

STEP 1 · CREATE
Script and film
Plan the content and film short videos independently

›

STEP 2 · ENHANCE
Add music with AI
Use the in-built AI tool to generate lyrics and music

›

STEP 3 · SHARE
Publish
Post the video on a personal YouTube channel

Learning to Create

The first module was conducted over two weeks, on Tuesday afternoons. Clients explored how to film, script content and add music for their short videos on their own, with volunteers right by their side to assist when needed.

Participants also learnt how to use the in-built AI tool to generate lyrics and music for their video, and to publish it on their personal YouTube channel.

A Fun Time for All

This was indeed a fun time for the participants, and a learning experience for many of the student volunteers, who joined us for the first time.
